

SWITCH ON LOCK OFF THINK **B4U** WORK

YOUR 'THINK B4U WORK' STRATEGY

1. Fully identify each circuit relating to the task.
2. Isolate the supply.
3. Lock out and tag out. Attach a danger tag for each worker involved in the task, consider the use of isolation padlocks.
4. Confirm Isolation. Apprentices should question work practices if in doubt.
5. Do the task safely and only reinstate the supply after each worker removes their own Danger Tag.
